

SotsiaalAI App Summary - Repo Evidence

Evidence date: 2026-02-24

WHAT IT IS

- SotsiaalAI is a Next.js web platform for AI-assisted social-sector support.
- It combines chat, document context, voice tools, rooms, and subscription-gated access.

WHO IT IS FOR

- Primary persona: social work professionals.
- Also supports people seeking help (client role).

WHAT IT DOES

- Role-based sign-in with email+PIN, OTP, and trusted device flow.
- Personal AI chat with SSE streaming and persisted conversations.
- Group rooms with membership roles, invites, and real-time message streams.
- File analysis sends uploads to a RAG service for ephemeral chat context.
- Voice dictation and playback via STT and TTS APIs.
- Subscription billing via Maksekeskus checkout init, callback, and webhook.
- Admin analytics and RAG admin tooling for usage, costs, and content ops.

HOW IT WORKS - ARCHITECTURE

- Frontend: Next.js App Router pages and React components/hooks.
- Auth/access: next-auth credentials login, role checks, and subscription gates.
- APIs: app/api routes handle chat, rooms, profile, invites, billing, and admin.
- Data: Prisma + PostgreSQL store users, chats, rooms, invites, and payments.
- AI: /api/chat uses OpenAI; a separate FastAPI RAG service uses Chroma+embeddings.
- Realtime: SSE for chat/rooms; optional Redis pub/sub fanout via lib/roomStream.js.
- Not found in repo: dedicated background worker or queue processing service.
